

## Key Performance Indicators Set

### Public transport use

This is a measure of public transport usage and health of the network. The total annual number of trips originating in the city is divided by the population count.

- MAIN REFERENCE: CityKeys, STEEP/REPLICATE, ISO 37120
- DATA SOURCE: municipal transport department, public transport companies
- MEASUREMENT METHOD: This indicator shall be calculated as the total annual number of transport trips originating in the city - “ridership of public transport” - (numerator), divided by the total city population (denominator) [trips/cap/y].
- PRIORITY: OPTIONAL
- Usefulness and user-friendliness: useful and easy to understand but not to compare because of interurban trips weight in small municipalities.
